

Kate Portalatin

Developer Experience · DevOps & Platform · Technical Program Management

k8@k8port.io · (214) 960-8189 · k8port.io · github.com/k8port · linkedin.com/in/kateportalatin · DFW Metroplex / Remote

Engineer and technical program lead with 10+ years across fintech, enterprise SaaS, healthcare, and logistics. My work sits where developer experience, infrastructure, and design meet — building the tooling, pipelines, interfaces, and documentation that let distributed teams ship, and running the coordination that keeps them aligned. A B.S. in Graphic Design and an M.S. in Computer Science mean I am equally at home in a deployment pipeline, a design system, or a room where an ambiguous roadmap needs to become an executable plan.

Available for direct-hire and contract-to-hire roles in developer experience, DevOps, and technical program management — and for contract engineering work across the stack, including part-time and short-term engagements.

WHAT I DO

DEVELOPER EXPERIENCE Micro-frontend shells, component libraries, design systems, API contracts, and the integration guides and onboarding assets that let teams self-serve.

DEVOPS & PLATFORM CI/CD pipelines, Terraform provisioning, Kubernetes and Helm deployments, observability, and chaos-tested resilience on AWS and Azure.

TECHNICAL PROGRAM MANAGEMENT Release coordination across dozens of teams, 0→1 initiative ownership, risk and dependency surfacing, and executive-legible communication grounded in how the systems actually work.

DESIGN ENGINEERING & FRONTEND React and TypeScript interfaces, design-to-code workflows, tokens, accessibility, and implementation QA that make dense data legible to the people acting on it.

FULL-STACK ENGINEERING Java and Spring Boot, Python, Node.js, and React on distributed teams — event-driven services, data pipelines, and the tests that keep them honest.

EXPERIENCE

JP Morgan Chase · Software Engineer II · Plano, TX

2025 – 2026

Lending Innovation — Pay in Four BNPL and variable-installment lending platform on AWS.

- o Built and operated event-driven lending services on AWS (EKS, ECS, Lambda, EventBridge, SQS/SNS, API Gateway, RDS MySQL) on a platform processing 4M+ transactions.
- o Traced distributed payment and lending workflows across messaging, APIs, and data stores to reproduce and resolve client-impacting issues in a regulated, audit-sensitive environment.
- o Maintained OpenAPI specifications as shared product-engineering contracts aligning downstream consumers and service owners, and deployed containerized services with Terraform, Kubernetes/Helm, and GitHub Actions.
- o Delivered sprint-sized features in 1–2 days using agentic AI workflows adopted as standard team practice.

Blue Yonder · Senior Software Engineer · Coppell, TX / Remote

2020 – 2024

Helped evolve the platform from an authenticated data pipeline into a multi-tenant enterprise SaaS logistics product. Worked across portal, data, and meta-model services as an IC on vertical-slice scrum teams, and as technical program manager under Platform executive leadership.

PORTAL SERVICES *Micro-frontend container for the multi-tenant platform UI.*

- o Built and owned the portal shell as a React/TypeScript micro-frontend used by 50+ product teams (~500 engineers), with Azure AD B2C auth and per-tenant role management.
- o Implemented RBAC-enforced navigation generating workspace features from tenant specs, using Composite and Strategy patterns behind a custom rules engine over role and permission tokens.
- o Automated tenant provisioning with parameterized Terraform modules and GitHub Actions CI/CD, cutting infrastructure spin-up time by roughly 50%.

DATA SERVICES *Real-time streaming pipeline for high-volume platform transactions.*

- o Designed Kafka event-driven services using topics and consumer groups for parallel transaction processing, improving end-to-end pipeline latency by 30%.
- o Built Java/Spring Boot microservices against PostgreSQL, Cassandra, Snowflake, and ELK, with JUnit, TestNG, and Spring Test coverage.
- o Orchestrated services with Docker, Kubernetes, and Helm across phased environments for versioned deployments, rollbacks, and hot patches.

TECHNICAL PROGRAM MANAGEMENT *Cross-cutting initiatives requiring technical depth and coordination.*

- o Coordinated release management across 25 teams (~300 engineers) under SAFe, building the planning and release environments that lifted developer productivity and story-level requirements quality.
- o Led cross-functional Product Development initiatives, securing buy-in from product owners and executives and translating architectural tradeoffs and delivery risk into executable plans.
- o Drove decisions across siloed expert groups, maintaining decision records and documentation in Confluence and SharePoint against a tightly enforced rollout schedule.

META-MODEL & OPEN DATA PLATFORM *Services driven by the platform meta-model as an abstraction of system structure and behavior.*

- o Grew tenant onboarding from fewer than 10 to 50+ product teams through integration guides, API references, and self-service assets; mentoring cut time-to-first-contribution from roughly 8 weeks to 4.
- o Cut Open Data Platform support load from roughly 8 items per month to 2 through documentation, tooling, and clearer platform contracts.
- o Led a 0→1 retail-prediction initiative for grocery clients from concept to prototype, coordinating ML, data engineering, and product teams and wiring the surface to Python streaming and ETL pipelines.

CoreLogic · Software Engineer · Coppell, TX 2019 – 2020

- o Built full-stack Spring Boot and Angular escrow applications with high automated test coverage on an extreme-programming, pair-programming team.
- o Implemented escrow payment automation, including a disbursement calculation engine and check-generation pipeline that simplified customer workflows.

Choptank Transport · Software Engineer · Preston, MD 2016 – 2019

- o Founding team member on a 0→1 greenfield CRM built with Node.js, Express, REST APIs, and Angular, reducing manual operational processes by 20%.
- o Designed a Java CTI adapter for Avaya IP Office/TSAPI, abstracting binary CSTA complexity into a REST and WebSocket façade the CRM could subscribe to.

Highmark BCBS / HM Health Solutions · Application Developer · Wilmington, DE 2015 – 2016

- o Maintained and enhanced z/OS, COBOL, and JCL applications supporting Blue Cross Blue Shield claims processing, resolving high-priority production issues in a regulated environment.
- o Built AngularJS interfaces over legacy mainframe workflows, modernizing the user experience while preserving operational continuity.

SELECTED PROJECTS

Sobres · React, Next.js, Python, FastAPI, SQLite, TDD — 0→1 envelope-budgeting app with PDF statement ingestion and transaction categorization.

k8sport.io · Next.js, React 19, TypeScript, Tailwind CSS — Portfolio and technical writing site presenting professional work and engineering notes.

Colorology · Python, GraphQL, Neo4j — Color data scraper and graph processor mapping relationships between colors.

TECHNICAL SKILLS

FRONTEND JavaScript, TypeScript, React, Next.js, Angular, Tailwind, SCSS, micro-frontends, design systems, Figma

BACKEND & APIS Java, Spring Boot, Python, Node.js, Express, FastAPI, REST, GraphQL, OpenAPI, Kafka

CLOUD & DEVOPS AWS (EKS, Lambda, EventBridge, SQS/SNS, API Gateway), Azure, Docker, Kubernetes, Helm, Terraform, GitHub Actions

DATA SQL, MySQL, PostgreSQL, Cassandra, MongoDB, Snowflake, Elasticsearch, streaming and ETL pipelines

QUALITY & OBSERVABILITY TDD, JUnit, pytest, Jest, Cypress, Prometheus, Grafana, Datadog, ELK, LitmusChaos

DOCS, AI & LEGACY API references, integration guides, decision records, Confluence; Claude Code, Cursor; COBOL, JCL, z/OS

EDUCATION

M.S. Computer Science · Saint Joseph's University · 2012–2014 **B.S. Graphic Design** · Art Institute of Pittsburgh · 2006–2010
